Get Involved!

The Important Bird Area (IBA) Program is part of a dynamic global effort to identify and protect outstanding habitats for birds, and has been responsible for safeguarding hundreds of thousands of acres around the world. Working closely with the New Jersey Endangered and Nongame Species Program and the National Audubon Society, the New Jersey Audubon Society has expanded this initiative with the Important Bird and Birding Area (IBBA) Program. This program identifies areas that are essential habitats for sustaining bird populations (Bird Areas) as well as areas that are exceptional for bird watching (Birding Areas).

The objectives of the NJ IBBA Program include:

- ✓ Identification of a network of sites providing essential habitat for birds and exceptional bird watching opportunities.
- ✓ Ensuring the continued viability of these areas through conservation and ecotourism efforts.
- ✓ Raising public awareness of the value of wildlife habitat.
- ✓ Generating increased support for conservation through education.

The IBBA Program is currently implementing a variety of conservation initiatives within several of NJ's 123 IBAs. Habitat conservation planning and forest stewardship workshops are held at priority sites such as the Mannington Meadows, Cohansey River Corridor, Cape Island, and the Northern and Southern Pinelands IBAs. NJAS acts as a liaison, connecting landowners with voluntary incentive programs that can assist them with the implementation of conservation practices. This approach brings a broad constituency together in a spirit of partnership that will ensure the successful conservation of IBAs.
